

Karndean's Environmental Policy Statement

We at Karndean International take our responsibility to protect and preserve the environment very seriously. Therefore we strive to use the most environmentally friendly materials and processes in all of our activities. We only work with suppliers and manufacturers who are committed to minimising their environmental impact.

All of our products are made in accordance with worldwide environmental standards. Our manufacturers make every effort to use the most efficient production processes available, thereby reducing energy and water consumption. We work closely with them to ensure that waste is reduced, reused, recycled or disposed of in a safe manner. We are actively investigating ways to recycle Karndean floor coverings that have reached the end of their useful life.

We keep our packaging to a minimum without risking damage to our products. Wherever possible, all the packaging and other disposables are collected and recycled. We transport our products in the most efficient and effective way to minimise our carbon footprint.

We do all the above so that we can provide beautiful floor coverings without jeopardizing the future of our planet. We regularly review our policies, practices and processes to ensure that we continue to operate in the most sustainable way.
